

## CONCERNED SOUTHSIDE

### Doubts

Continued from Page 1A.

After the heavy rain falling in the last weeks, soil and water samples were taken to see how much rain water could be taken up by the soil.

For up to 100 feet below the surface, the soil is saturated with water. This means that any rain that falls will be taken up by the soil.

The report also indicates that the soil is saturated with water. This means that any rain that falls will be taken up by the soil.

The report also indicates that the soil is saturated with water. This means that any rain that falls will be taken up by the soil.
